Introduction

Purpose

The purpose of this document is to describe the requirement specification for the web site “Shoe Inventory”.

The intended audience for this document are sneaker heads and rich people who have too much money and spend it all on shoes and others in need of a similar website.

Definitions, acronyms, and abbreviations

Sample for the client:

HTML – Hypertext markup language – used to define your content.

PHP – Personal Home Page – language that helps to customize html.

CSS – Cascading Style Sheets – used to define the look of a web site.

W3 Validation – refers to both Html and CSS validation tool provided by the W3c.org. the html validator is located at:

<http://validator.w3.org/>

with the CSS validator located at:

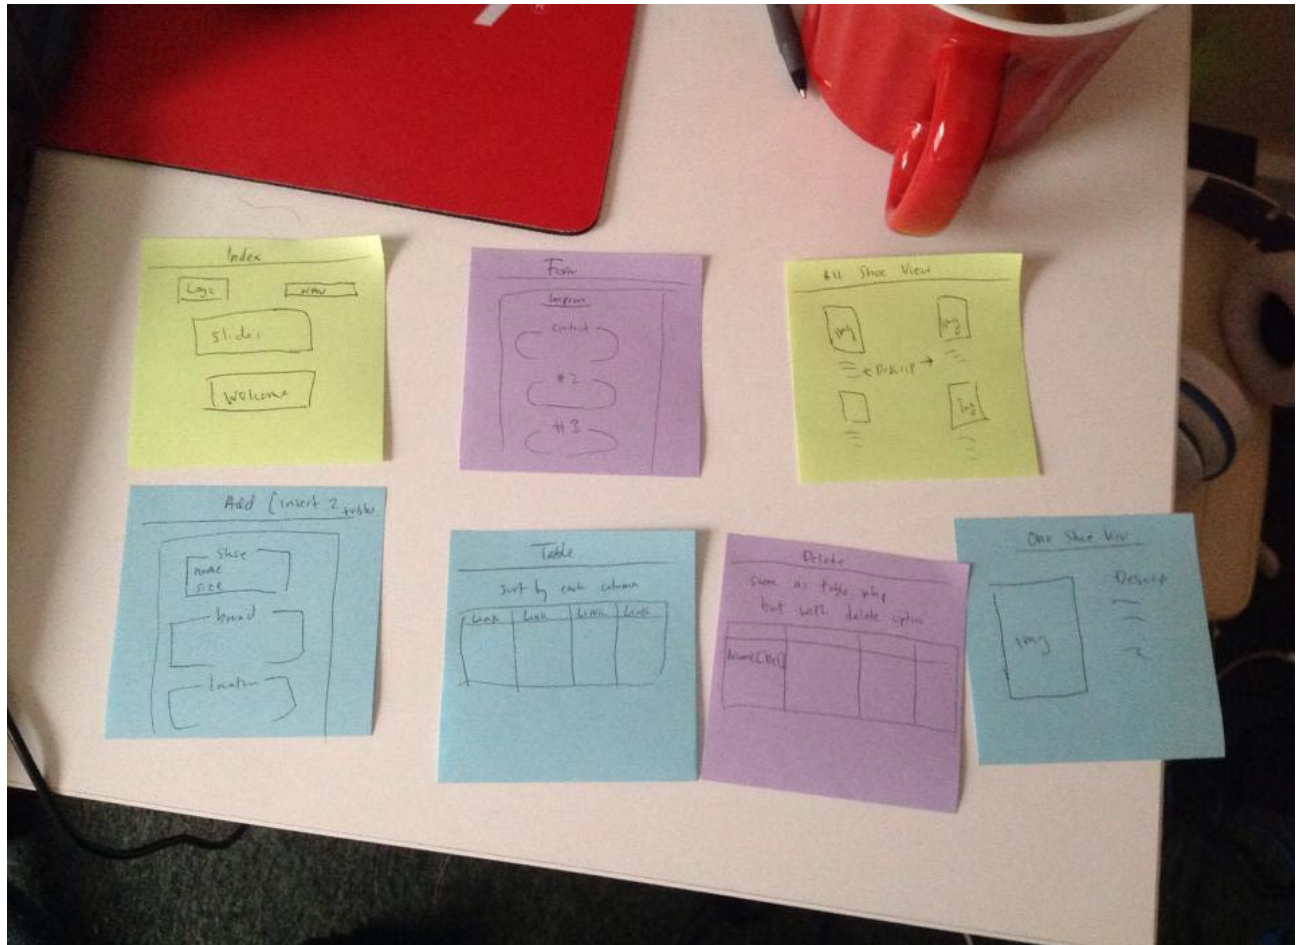

<http://jigsaw.w3.org/css-validator/>

Overall Description

This website is designed to help sneaker heads manage and organize their collection of shoes. As shown through the media, many sneaker heads, mostly celebrities, have rooms and even garages full of shoes. With that many sneakers, this site aims to make organizing and finding shoes easier.
